

Notes:
This figure illustrates the (probably non-standard) structure of the following sequence diagrams. The left-hand figure describes the abstract representation while the right-hand figure represents an example of the abstract illustration. The outer frame represents one of the four main (technical) entities of the Chorus Prototype System, e.g., Smartphone, magic box, vehicle and blockchain. Within each entity we have different components (orange). The components have several different sub-process or applications, e.g. for the Chorus App -> UI, Plugin Manager, etc. . Sub-processes may have additional sub-processes (Plugin Manager -> Good-Driving-Behaviour Plugin). The components and (sub-processes) are accessed via an interface (modularization). The exact interface design is up to Peter due to his vast programming experience.
